INDIVIDUAL CONTRIBUTOR DOSSIER • LEAD FULL-STACK FRONTEND & UI/UX ENGINEER

Yuvraj Kadam

Team: Reconstruct.ai | **Institution:** JSPM RSCOE, Pune

Event: We Code Coders Hackathon

Domain: Next.js 14 Application, Continuation Workspace Kanban & NotebookLM Citation Drawer

Email: yuvraj@reconstruct.ai

Repository: github.com/Dhruvplaz-web/reconstruct-ai

1. Personal Mandate & Individual Contribution Statement (Rule 14)

As the Lead Full-Stack Frontend and UI/UX Engineer, I own the user-facing web application of Reconstruct.ai. My mission is to eliminate the 'Wiki Graveyard' by replacing static reading pages with an interactive, living continuation hub. I architect the responsive frontend using Next.js 14 (App Router), Tailwind CSS, and Radix UI primitives, strictly adhering to an 8-point spatial grid. I specifically engineered the NotebookLM-style Citation Sidecar Drawer (which smoothly reveals exact source diffs upon clicking citation chips), the Day 1–30 Actionable Onboarding Kanban, and the 60-Second Leaver Review Modal.

2. Subsystem Ownership & Technical Architecture

- **Next.js 14 App Architecture:** Server-side rendered speed, client-side state caching, and URL-first shareable filters.
- **Interactive Continuation Workspace:** 3-column layout featuring Temporal Decision DAG, Executive Briefing, and Actionable Kanban.
- **NotebookLM-Style Citation Sidecar Drawer:** Slide-out drawer displaying code diffs and Slack transcripts side-by-side with the active claim.
- **60-Second Leaver Review Modal:** Frictionless 3-question prompt interface with cryptographic approval stamp for departing developers.

3. Technical Deliverables Across All 3 Rounds

Hackathon Round	Personal Responsibilities & Concrete Engineering Deliverables
Round 1: The Plan (Current Phase)	Designed the component blueprints, UX wireframes, 8pt spatial design tokens, and defined the 5 core web module interface architectures.
Round 2: The Build (Working Functional MVP)	Build and deploy the functional Next.js 14 web client, implement the 1-Click Demo Playground interface, and connect live REST endpoints from the FastAPI backend.
Round 3: The Finish (Production Polish & UAT)	Implement interactive Temporal DAG graph visualization, keyboard accessibility (WCAG AA), active focus rings, and responsive layouts stress-tested across mobile (375px) and desktop (1440px).

4. Competitor Failure Analysis & Defense for this Domain

Swimm provides code walkthroughs but is a code-only silo. Confluence provides documents that nobody reads. Reconstruct.ai combines the document readability of Confluence with the live code-coupling of Swimm and the citation trust of NotebookLM.

5. Judge Viva & Technical Decision Defense (Rule 16 Preparation)

Per Rule 16 ('Judges may ask any team member to explain the product, demonstrate a feature, justify a technical decision or verify their contribution'), this section details the anticipated questions and defensible justifications:

Anticipated Judge Question / Challenge	Defensible Technical Justification & Verification Evidence
Q1: How does your UI design solve the 'Two-Week Notice Paradox' for a departing employee?	We designed the '60-Second Leaver Review Gate'. Rather than asking the leaver to fill out a blank wiki, our system mines Git Blame for orphan code and presents only 3 targeted micro-questions with 1-click dropdowns. They approve the handover in under 1 minute.
Q2: Why did you choose Next.js 14 and Tailwind over heavy UI component libraries?	Next.js 14 App Router provides instantaneous server-side rendering and zero client-side JavaScript bloat. Radix UI headless primitives give us full ownership of accessibility (focus trapping, keyboard navigation, aria labels) without the monolithic baggage of heavy design libraries.
Q3: How does the UI handle permission-based redactions for incoming junior developers?	The UI features a live Role Switcher dropdown. In 'Junior Successor' view, restricted tokens (salaries, AWS keys) are rendered as blurred [REDACTED BY PERMISSION POLICY] badges with tooltips explaining required access tiers, strictly proving trust-awareness to judges.

6. Full Project Team Roster & Peer Verification

Member Full Name	Assigned Role	Institution	Project Verification Status
Khushi Patil	Team Lead & Head of Research	JSPM RSCOE, Pune	**VERIFIED (Team Lead)**
Dhruv Patil	AI Development & Core Engineering Lead	JSPM RSCOE, Pune	**VERIFIED (AI Core Lead)**
Yuvraj Kadam	Lead Full-Stack Frontend & UI/UX	JSPM RSCOE, Pune	**VERIFIED (Frontend Lead)**
Nimisha Joshi	Systems Backend, Ingestion & Security	JSPM RSCOE, Pune	**VERIFIED (Backend Lead)**
